

# STOP TRIPPING OVER UNEVEN, SUNKEN AND CRACKED CONCRETE!

## DON'T REPLACE IT... MUDJACK IT!

60 - 80% less than replacement.

No waiting a month for it to cure/dry.

No concrete waste and debris.

Surrounding areas are not dug up.

No loss of use. Walk on it right away.

- It's a relatively quick and easy process.
- Cost to raise the concrete slab is about 60 – 80% less than replacement.
- Most jobs take one day or less!
- No slabs removed = very little mess or inconvenience!
- Grout used to raise the slab provides a stable base and strengthens the slab.
- No loss of use - This technique allows you to use the slab almost immediately.
- Surrounding landscape is not dug up.
- No waste = better environmentally!

*"American Mudjacking raised 2 side walks to grade. A total of 7 slabs raised up to 5". The price for the whole job was less than others and definitely less than replacement! They did an excellent job, were on time and were very responsive. Would definitely use them again!"*

## MUDJACKING CONCRETE RAISING AND LIFTING

is an alternative to replacing sunken or uneven concrete. The process restores the sunken concrete slabs to their original grade. It is a simple and effective process of raising, lifting and stabilizing faulty concrete pavement that costs significantly less than replacement.

### STEP 1

*We drill strategically placed holes into the existing concrete slab.*

### STEP 2

*We fill the holes with a special cement mixture to lift the slab into place.*

### STEP 3

*Once the slab is raised, we fill the holes and it's ready for use in just a few hours!*

## Basically Any Concrete Flatwork Can Be Raised

- Driveways
- Patios
- Walkways
- Sidewalks
- Pool Decks
- Stoops
- Steps
- Garage Floors
- And More!
